

Numeracy Stage 5 Lesson: Measuring using Cups (estimating)

Outcome: MALS-25MG

Materials: Computer, internet connection, different containers.

Before you measure:

Watch the video <https://pbskids.org/peg/games/bubble-bath> and play the game (see how many cups it takes to fill the bathtub).

Instructions:

Find a large container (sink or bucket for example).

Find a small container (cup or bowl).

Estimate how many of the smaller containers full of water will fill the bigger container.

Then, measure cups of water to fill up the bigger container.

See if you were right!
